

Olympus Offers Free Use of Telecollaboration Platform to Limit Exposure and Preserve PPE During COVID-19 Pandemic

The healthcare system is facing unprecedented challenges during the COVID-19 pandemic. As hospitals attempt to diagnose and treat the influx of patients with the shortage of Personal Protective Equipment, and also the curtailing of all non-essential personnel from the facility, the need for remote collaboration is more important than ever before.

Olympus has an established, HIPAA compliant medical virtual presence solution called MedPresence. MedPresence goes beyond video and chat by using real-time clinical videos and patient information to provide remote participants with the same experience virtually. Here are three of the many values MedPresence can provide to hospitals during this challenging situation:

- Lower the exposure rate by enabling experts, reps, and other necessary personnel to consult virtually
- Minimize the consumption of necessary Personal Protective Equipment
- Maintain your HIPAA compliance

If you are an existing Olympus integrated surgical suite and/or image/video recorder customer, you may be eligible for a 3-month activation of our virtual MedPresence software at no charge. Please contact your Olympus Sales Representative to get all the details.
